What Moves Market?

Economic Factors:

- Interest Rates
- Inflation
- GDP

Central Banks:

- Federal Reserve
- ECB

Global Events:

- Wars
- Political instability
- News

How Forex Trading Works?

Buy (Long Position)

When you expect the price to increase, you enter a buy trade.

- Buy Low → Sell High

Example:

- Buy EUR/USD at 1.1000
- Sell at 1.1100
- **Profit = 100 pips**

Sell (Short Position)

When you expect the price to decrease, you enter a sell trade.

- Sell High → Buy Low

Example:

- Sell GBP/USD at 1.2500
- Buy at 1.2400
- **Profit = 100 pips**

Profit can be made in both rising and falling markets.
